

## ABSTRACT OF THE DISCLOSURE

One vehicle clutch (6) is situated in a vehicle between a prime mover (2) and a transmission (4) and is controlled according to the rotational speed of the prime mover (2). As centrifugal clutch, the vehicle clutch (6) has elements (26, 32) which cause a variable torque transmission according to the rotational speed of the prime mover (2). The vehicle clutch (6) is actuatable without an externally actuated actuator, is the only clutch located between prime mover (2) and transmission (4) and is provided as starting clutch without possibility of interruption of traction during shifting operations.
